Flow control at Data Link layer

Exp no: 7 Date:

Aim:

Write a program to implement flow control at data link layer using SLIDING WINDOW PROTOCOL. Simulate the flow of frames from one node to another.

→ Program should achieve at least below given requirements. You can make it a bidirectional program wherein receiver is sending its data frames with acknowledgement.

* Create a sender program with following features:
  i) Input Window size from the user
  ii) Input a text message from the user
  iii) Consider 1 character per frame
  iv) Create a frame with following fields
  v) Send the frames.
  vi) Wait for the acknowledgement from the Receiver
  vii) Reader a file called Receiver_Buffer
  viii) Check ACK field for the Acknowledgement number
  ix) If the Acknowledgement number is as expected, send new set of frames accordingly.

* Create a receiver file with following features:
  → Reader a file called Sender_Buffer
  → Check the frame no.
  → If the frame no. are as expected, write the appropriate ACK no. in the Receiver_Buffer file.
